

# A Comparison of Naming Practices in Eastern and Western Finland in Late 16th Century<sup>1</sup>

Unni Leino<sup>2</sup> / Pietari Uv<sup>3</sup>

## Abstract

It is well known that there were clear differences between the naming practices in Eastern and Western Finland during the medieval / early modern period. However, studies have generally focussed on data from one of these regions, mainly in order to be able to do an in-depth analysis. This study aims to be explicitly comparative, by taking a set of names from each of these regions and looking at the similarities and differences between the two sets.

In order to keep the two sets comparable, the data is taken from two tax registers in the third quarter of the 16th century, one in Upper Satakunta in western Finland in 1571 and another in Savonia Minor in eastern Finland in 1562–64. This is not altogether ideal, as it is clear that tax records had specific traditions with regard to how the names were recorded and thus the names do not fully reflect the practices in the overall community. Nevertheless, it can be seen that while the given names in both registers are quite similar, the surnames show clearly that the underlying name systems differ.

## Introduction

Looking back in time, it is possible to see three separate Finnish personal name systems. This division into three main systems is of course something of an oversimplification, as there is variation within each of these, and the lines between the systems are not sharp. Nevertheless, the division is useful in describing the history of personal naming in Finland.

The oldest of the three systems dates from Proto-Finnic times and reaches up to about 1300. It is usually called the Ancient or Old Finnish system, although the latter term is somewhat misleading, considering that the term Old Finnish itself refers to the phase of the language that was in use c. 1540–1820 (see e.g. Lehikoinen–Kiuru 1989: 2). A brief overview of the system can be seen in Ainiala et al. (2012: 157–159), and in-depth reconstructions have been proposed by Forsman (1894) and Stoebke (1964). This personal name system was replaced relatively soon after the Catholic church and the incipient Swedish state spread their influence to Finland, and in the 14th century when names appear in written records more than just sporadically in Western Finland, only a handful of names are left. By the 16th century, when records from Eastern Finland are available, the ancient names have already disappeared from common use, although traces have survived in place names and surnames to the present day.

Starting from around 1200, the Ancient Finnish name system was replaced by one that is clearly a part of the medieval Scandinavian culture. In this system, a person would be given a single name at or around baptism, and this would be augmented by one or more surnames as needed. While this name system developed gradually over the centuries, as a system it continued until the start of the 20th century. Switching over to a system that consists of given and surnames was a slow process influenced both by the modernisation of the Finnish society and the rise of national consciousness in the second half of the 19th century (Mikkonen 2013, Paikkala 2004).

The bulk of the given names in the medieval system are of Christian origin and at least in Western Finland the surnames follow the practice of the rest of Scandinavia. For the most part, given names

<sup>1</sup> An earlier manuscript that led to this article was written for a book intended to honour the memory of Judy Gerjuoy, known as Baroness Jaelle of Armida, Argent Snail Herald Extraordinary and former Laurel Queen of Arms. Unfortunately the book never came to be; this article is nevertheless dedicated to her memory.

<sup>3</sup> Töllöö Härold, Drachenwald College of Heralds

appear in documents in Swedish form, although it is clear that most had separate Finnish colloquial forms. Records from the medieval period are relatively few, and most of the historical data we have is from the post-reformation period. Still, from the existing medieval records it is evident that in Finland the reformation did not bring immediate changes to the name system like it did in Central Europe.

Virtually all late medieval and 16th century given names come from a limited set of saints' names. This custom, originally started by the Catholic Church, continued after reformation: the first Lutheran breviarium (*Agricola* 1544) includes a calendar of saints' feasts, although these were no longer fully celebrated in the Catholic manner. Later the tradition of assigning 'name days' moved from the Church to the almanacs given out by secular authorities; currently the tradition is upheld by the Almanac Office at the University of Helsinki.

Medieval Scandinavian names were used in the context of what Ainiala et al. (2012: 129–135) call a system based on single names. That is, there was no systematic use of surnames or similar to augment the single baptismal given name. This is true at least for most of the Kingdom of Sweden – Blomqvist (1990) cites King John III in 1573: 'Here in Sweden, it has not been nor is it the general custom to use surnames or family names as in foreign countries.' However, while Western Finland was in line with the rest of the kingdom, in Eastern Finland family names were in use already in medieval times (e.g. Paikkala 2004: 110, 2007: 206). This is one argument Forsman (1894: 119–132) presents for his tentative and, to be frank, rather weak hypothesis that family names were already present (even if not mandatory) in the Ancient Finnish name system.

As in the rest of the kingdom, bynames were added to the single given name when necessary. Later on – ultimately by 1921 when the Surnames Act went in effect – many of these bynames developed into hereditary surnames, but in the second half of the 16th century the vast majority of Western Finnish bynames were still individual and could change from one document to another.

Studies on the development of the Modern Finnish personal name system acknowledge that family names were used in Eastern Finland at least in the early modern period. However, as medieval records are only available from the Western provinces the descriptions of the Medieval Finnish name system are heavily slanted in that direction. The goal of this brief study is to look at the differences between the naming practices in Eastern and Western Finland, based on the names in two 16th century administrative record books.

## Data

The data comes from two sources. From Eastern Finland, I have used the 1562–64 land register of Savonia Minor (Alanen 2010, printed version 2008). From Western Finland, I have used data that originates from the 1571 silver tax register, available electronically as a part of a more general compilation of personal names from Satakunta (Suvanto 2001).

The Eastern data set covers three Savonian parishes, Sääminki, Rantasalmi and Tavinsalmi (modern Kuopio). There are 1504 persons in the set. The Western data was not as easily accessible, so I picked out only the names from the parish of Kangasala, 433 persons. While the data sets are not exactly similar, they are nevertheless close enough for a comparative study: both are administrative records that list farm owners, there is less than a decade between the two, and both have enough names in them for a representative analysis.

Since the data comes from two lists of farms and their owners, there are some limitations. First, it is impossible to tell anything about female names. The only woman in the data is Karin Hansdotter, former unwed wife of Johan, Duke of Finland (since 1568, John III of Sweden) who had been given the manor of Vääksy when the couple separated.<sup>4</sup>

<sup>4</sup> Cohabitation seems to have relatively common in those days, so that *Agricola* (1549) takes half a page while introducing the marriage ceremony to speak against those who »for five or six years, or even longer, sleep together and bear bastards». John and Karin had four children but had to separate when it became politically expedient for him to marry Catherine Jagellon, sister of the King of Poland, in 1562. The eldest of these children became the mother of Count Jacob de la Gardie, later Lord High Constable of Sweden and the only Western general so far to successfully occupy Moscow (although he's more famous for spending six years occupying Novgorod); he was raised by Karin in Vääksy after being orphaned at a young age.

Second, the people in the data sets were the farm owners, that is, the wealthiest ones in their immediate neighbourhoods. It is not completely clear how close to these the names of the landless would have been, although the names in Suvanto (2001) that come from judicial records seem to indicate that there was no real difference.

Third, one should keep in mind that the data comes from land and tax registers. While this means that the two sets are comparable it also means that some of the patterns may be due to conventions of the genre of administrative records. Most notably, locative bynames are likely to be under-represented, as the records are organised by village and farm. Local name use was more varied than this data set, although – again, judging by an overview of the names collected by Suvanto (*ibid.*) – the difference is not overly massive.

## Names

There are 56 different given names in the data, of which 35 appear in the Western and 51 in the Eastern corpus. Table 1 shows the names and the number and frequency of their occurrences. The table does not list actual documentary forms of the names, but instead normalised modern forms; in the case of the names found in Western Finland, these are the same as the header spellings used by Suvanto (2001). The actual documentary forms found for each of the names are listed in Appendix 1.

Table 1. Given names and their occurrences in the Western and Eastern data sets.

One might expect given names to follow the so-called Zipf's law, that is, for the frequency of the  $n$ th common name to be roughly  $1/n$  of the most common one (Zipf 1949: 35). As seen in Figures 1 and 2, the rare names do indeed behave in this manner, but the most common ones are much more common than expected. This is not quite as unexpected as it seems, though: as a comparison, Figure 3 shows a similar plot of Finnish boys' first names given in 2000.<sup>5</sup> All in all, it would appear that Zipf's law in its original form does not adequately describe the most common personal names and this discrepancy is consistent in 16th and 21st century.

<sup>5</sup> The numbers come from prior work done on names in the Finnish population register, courtesy of the Institute for the Languages of Finland.

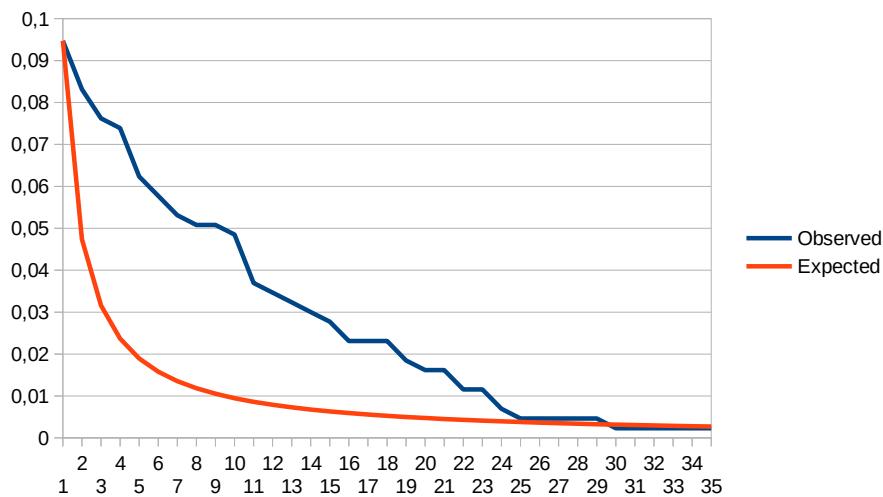

Figure 1. The observed and expected frequency of the given names in the Western Finland data set.

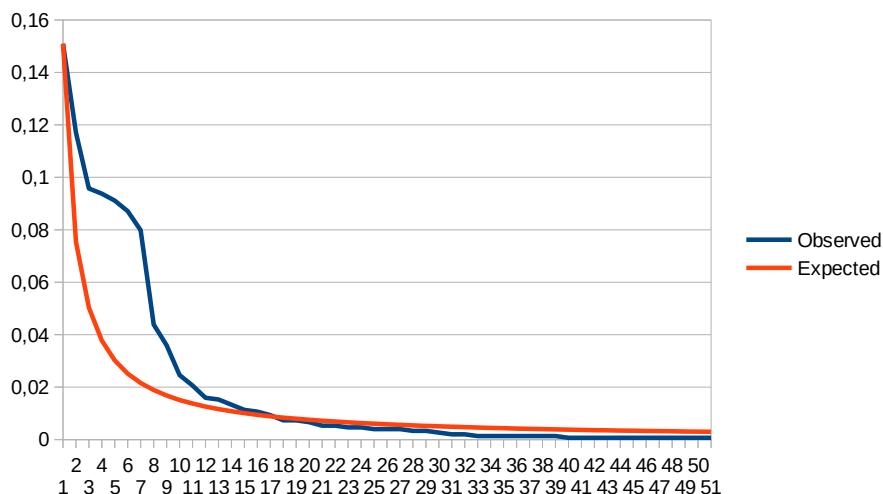

Figure 2. The observed and expected frequency of the given names in the Eastern Finland data set.

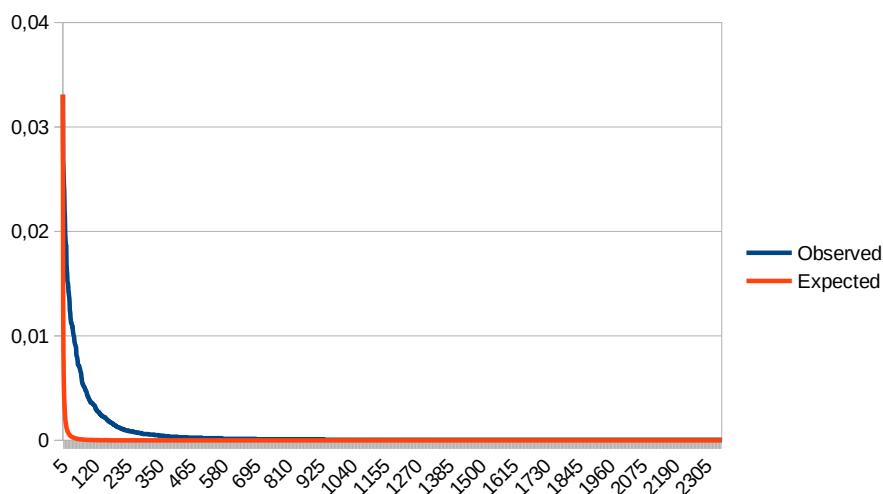

Figure 3. The observed and expected frequency of first names given to Finnish boys in 2000.

It is noteworthy that the patron saints of Scandinavia and Finland – or, at this time, the Diocese of Åbo – appear near the top of both the Eastern and Western list. *Olavi* (Suvanto's normalised spelling of S. Olaf) is number 1 in the Western and 2 in the Eastern set; *Heikki* (or S. Henry) is number 2 in the Western and 7 in the Eastern set. One of the patron saints of Sweden, S. Erik (in Suvanto's spelling, *Erkki*) appears somewhat later, as the 10th common name in the Western and 15th in the Eastern data set, and the other one, S. Bridget, does not appear at all because of the lack of female names in general.

There appears to be some systematic variation in the forms of individual names. Notably, the name habitually normalised by historians as *Jaakko* appears exclusively as *Jacob* in the western data set. In the east, however, it is most commonly recorded as variants of *Kauppi*, dropping the first syllable. Similarly, the name normalised as *Juho* is recorded as *Jon / Jons / Jöns* in the west, missing the second syllable of the original *Johannes*. This is a common Swedish practice, while the Eastern data set has several examples of *Hans*, a German-style variant that has lost the first syllable. Both of these can be seen in patronymic bynames as well.

Two persons in the Eastern data set appear without a clear given name: one is listed as *Vanha Talonpoica* ('The Old Farmer / Peasant'), another, *Hiffua Jerffueleinen*, appears to be listed under a descriptive byname (*Hiiva* here likely 'Drunkard' or 'Devil')<sup>6</sup> followed by a family name, although Mikkonen and Paikkala (1984 s.n. *Hiiva*) ponder whether this particular entry is a nickname or a local spelling of the German given name *Hiiva*, as has been suggested.

All in all, the given names seem to have been rather similar in Eastern and Western Finland. With bynames, however, there are significant differences. Table 2 lists the different types of bynames; original spellings of these, sorted under modernised spellings, are in Appendices 2–5. In the table, 'family names' is used as a shorthand for surnames ending with the suffix *-nen*, still a very common type of family names. Some of the names listed as 'other bynames' in both corpora are likely to have been hereditary as well, although as this category is rather small the numbers as shown in the table give an adequate general picture of the two naming systems: less than 2 % of the people listed in either corpus have a byname that is neither locative, patronymic or a family name, and in the Eastern Finland one just under 90 % have a family name.

Type	West		East	
	#	%	#	%
Patronymic byname	385	88,9	366	24,3
Family name	2	0,5	1315	87,4
Locative byname	33	7,6		
Other byname	12	2,8	29	1,9
Patronymic + family name	1	0,2	247	16,4
Patronymic + other byname	1	0,2	3	0,2
Patronymic + locative byname	8	1,8		
Locative + other byname	1	0,2		
Family name + other byname			4	0,3
Given name only	12	2,8	48	3,2
Single byname	410	94,7	1202	79,9
Multiple bynames	II	2,5	254	16,9
Total individuals	433		1504	

Table 2. Different types of bynames, their absolute numbers and frequencies in the two corpora.

The overwhelming majority of the Savonian family names follow a pattern that has survived to

<sup>6</sup> In modern Finnish, *hiiva* means 'yeast', but in this period and cultural environment the meaning would have been 'hops' instead. Alternatively, the byname may be related to the word *hiisi*, originally used before Christianity for cult places but later acquiring a meaning of 'devil'.

the present day. The typical family name has the suffix *-nen* added to a base word that can be, once one digs far enough, be traced to an old personal name or in some cases an animal name;<sup>7</sup> according to Paikkala (2007: 206–7) it is unclear whether the latter have originated from the byname of an eponymous ancestor, a house name, or a totem name.

Some of the personal names embedded in family names are very old, like *Ihalempinen* < \**Ihalempi*, hypothesised as a Proto-Finnic personal name by Stoebke (1964). On the other hand, some personal names are also clearly Christian in origin, like *Heikkinen* < *Heikki*, the most common Finnish variant of *Henry*. This raises the possibility that the *-nen* type of family names was productive for a long time,<sup>8</sup> and Fosman (1894) suggests that they may have already been a part of the Ancient Finnish name system. However, ancient given names survived in the west as bynames that were sporadically inherited, and it is at least as plausible to suggest that in the east similar bynames developed into fully-formed family names in medieval times.

Locative bynames are rare in the Western corpus and do not appear at all in the Eastern one. This is likely due to the nature of the corpora: as tax records are organised by village and farm, using village or farm names as bynames is redundant. Where locative bynames appear they fall into four categories, of which by far the most common is to use the farm or village name as it is, in the nominative case: *Matz Häkärä*. While most of the locative byname fall into this category, it seems likely that this is a scribal usage that is not necessarily in line with how the people used the names.

A less frequent way to form locative bynames is to derive an adjective from the toponym: *Jons Doliamoinen* from a farm name that Suvanto has normalised as *Toljola* and that appears as *Tolja* in the 1565–71 church tax records.<sup>9</sup> Yet another way to form a byname is to use the toponym in the genitive case: *Oleff Pobialahden* (< *Pohjalahti*).<sup>10</sup> Finally, it is possible to form a locative byname as if it was a patronymic: *Oleff Hinckasson* ('son of Hinkka') < *Hinkka / Hinkkala*.

The bynames categorised as 'other' are a somewhat mixed lot, as can be expected, and many are more or less opaque as to their origin. Some can be seen as occupational, like *Seppä* ('Smith', with one of the two occurrences recorded in Finnish as *Seppä* and the other translated into Swedish as *Smedh*); some appear to be descriptive, like *Suripä* (*Suuripää* 'Big-head'), some are animal names, like *korpi* (*Korppi* 'Raven'), and some ancient Finnish personal names, like *Kaukapäinä* (*Kaukapäivä*). An interesting case is *Wehäpy* (*Vähäppy* 'Little Grouse'): Suvanto (2001) also lists the byname *Pyy* ('Grouse') in the prior generation and *Isoipy* (*Isopyy* 'Big Grouse'), attached to the same given name but on a neighbouring farm in 1567. It is not clear from the surviving documents whether the bynames *Vähäppy* and *Isopyy* refer to the same person or if this is a way to differentiate between two people who share the same given name and inherited byname.

As can be seen from the table, the bynames in two regions are quite different. In the Western Finland corpus, the vast majority of the people mentioned have a given name and a byname listed; in the Eastern Finland corpus, family names are used to a similar extent, although in a large number of cases with patronymics as well.

## Conclusions

There is a clear difference in the naming systems in Eastern and Western Finland: in the West, as in the Swedish-speaking part of the kingdom, people used a single given name and added a byname – most

<sup>7</sup> There are also half a dozen family names like *Hämäläinen* 'Tavastian' that appear to follow this type but on the other hand are also regular adjectives derived from a place name. In this study they are listed among the *-nen* type family names, as they are consistently used as such in parish registers kept since late 17th century.

<sup>8</sup> In fact, the *-nen* construction is still productive to some extent, and Paikkala (2004) shows how a new subtype developed in the second half of the 19th century. In the new *Virtanen* type, the base word is an appellative nature term, as opposed to the proper names in the older *-nen* type family names. Some of the old family names are still widely used, too, to the extent that a few years ago *Korhonen*, seen also in this corpus, displaced *Virtanen* as the most common Finnish family name.

<sup>9</sup> The *D* vs. *T* in the name is a matter of orthographic variation.

<sup>10</sup> Here, the word order is likely influenced by documentary practices. In the vernacular, bynames like this would likely have appeared in front of the given name; Joalaid (2014) notes that this is a common Finnic word order and goes on to suggest that it may have Finno-Ugric roots.

commonly a patronymic – when necessary. In the East, on the other hand, most people used a family name in addition to their given name, although it was relatively common to augment these with a patronymic.

While it has been known that family names were already in use in Savonia in the 16th century, the extent to which this happened is slightly unexpected. In this data, family names were used by almost 90 % of the people listed, the overwhelming majority being of the *-nen* type. On the other hand, surnames appear to have been very rare in Western Finland. Some of the ‘other’ bynames were clearly hereditary: Suvanto (2001) cites also older records, and in three cases a non-locative byname appears for two or even three generations. However, as seen from the *Pyy / Isoipy / Wehäpy* case, such inherited bynames could when necessary be modified in ways that fully-formed family names would not be.

The difference can have its roots in cultural differences, most notably the different styles of agriculture. In Western Finland, agriculture was based on well-established villages and farms and continuously farmed fields, while in Eastern Finland slash-and-burn farming was the norm. This meant that people in the East could not be identified by their home farm in the same sense than those in the West, and instead developed family names that were for the most part derived from personal names.

On the other hand, it is also possible that the Western name system was a more direct cultural loan from the Swedish-speaking part of the kingdom while the Eastern system had retained more of the ancient Finnish practice. Even under this interpretation, however, it is clear that the Eastern family names had lost a lot of their patronymic origin and developed into a category of hereditary family names that could in some cases be formed from locative bynames, especially ones that fit the morpho-phonological pattern.

In any case there is a clear difference between the naming practices in the Western and Eastern corpora. There is some overlap, as can be expected, but all in all the differences are sufficient to consider late medieval Finland as having had two distinct, although closely related, naming systems.

## Appendix 5: Other bynames

### Western corpus

Omoinen<sup>11</sup> ‘Ram’, Rangu, Raru, Soini ‘Squire’, Tarhape ‘Orchard-head’, Wehäpy ‘Little Grouse’, Värdainen ‘Equal / Good’

### Eastern corpus

Hauka ‘Hawk’, Hetamies ‘Sandman’,<sup>12</sup> Hiffua ‘Yeast / Hops / Drunkard’, Kauckapäiuä,<sup>13</sup> Kuppi ‘James / Merchant’, kiffuen Rauta ‘Stone-iron’, korpi / Korpij ‘Raven’, Merska, Reeske, Rennar ‘Distiller’, Rijttare ‘Knight’, Saha ‘Saw’, Seppä ‘Smith’, Skoningh ‘Scanian / King’,<sup>14</sup> Smedh ‘Smith’, Sorssa ‘Mallard’, Sorfvari ‘Lathe-worker’, Suripä, Swripää ‘Big-head’, Danska ‘Dane’, Tilmakar ‘Bricklayer’, Tulen wändäija ‘Fire-bender’, Tynnebindare ‘Cooper’, Vanha Talonpoica ‘Old Peasant’, wixo

<sup>11</sup> It is apparent from other documents that the *m* is a misspelling and the name should read *Oino-*.

<sup>12</sup> This should be taken literally and not as a reference for the incarnation of dreaming.

<sup>13</sup> Stoebke (1964) lists *Kaukapäivä* as a Proto-Finnic personal name.

<sup>14</sup> The byname can come from either the Province of *Skåne* that was fought over by Sweden and Denmark, or from *kuningas* ‘king’. The latter term was often used colloquially for various foremen as well as the ruler of the country.
